

Velyss

The best solution to
disinfect your hotel rooms

EFFECTIVE AGAINST COVID-19

Enveloped viruses like coronavirus can be neutralized by high temperatures. The Velyss meets the AFNOR NFT72-110 standard of March 2019 describing the disinfection capacities of steam devices.

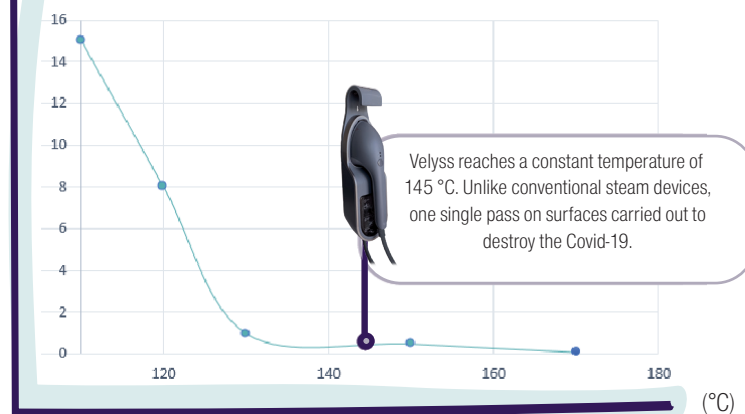

ENVIRONMENTALLY FRIENDLY

Thanks to the use of high temperature moist heat, no chemicals are added to destroy viruses.

(s)

EXPOSURE TIME (S) TO DESTROY THE COVID-19 DEPENDING ON TEMPERATURE (°C)

Sources: Projections based on scientific journals (*): The LANCET microbe 04/2020, DUIZER and AL. 2004, Viral inactivation by physical methods, Swan Firquet, Phd 17/12/14.

“ Scientific publications* have proven that Covid-19, adenos viruses, influenza viruses must be subject to temperatures above 100°C for 1 to 360 seconds to be inactive. From 140°C, the simple control of constant temperature allows in one pass to destroy by coagulation the proteins of viruses like Covid-19.
